

## Installation Instructions

**STEP 1:** Without letting the luggage rack contact the travel trunk, hold the rack in its approximate installed position. Notice where the four mounting 'legs' will rest on the trunk.

Set the rack aside, and place masking or duct tape on the trunk lid at these four points to prevent scratches.

**STEP 2:** Set the luggage rack on the trunk so the mounting legs rest on the tape strips. Carefully center the rack on the trunk lid. Hold the rack firmly in place and trace around the four legs. Remove the rack again, and mark the center of the 4 circles traced on to the tape. Drill a 9/31" hole at these points and remove the tape strips.

**STEP 3:** Secure the rack to the trunk using the hardware kit included. Assemble the hardware components as shown in **Figure 1**.

**Caution: Do not overtighten the mounting bolts!**
